About me

Hello, my name is **Dimas**.
Nice to meet you!

Freshgraduate mathematics who has strong interest in **machine learning, data analytics, graphic design**, and **software development**. Eager to learn new things to know it's better.

Familiar with some things related to the data analytics such as make **predictive model, visualize data**, and also doing **statistical test** to the data before I analyze it.

Educations

Universitas Gadjah Mada (2021 - 2025)
B.Sc in Mathematics (GPA 3.40/4.00)

SMA N 1 Boyolali (2018 - 2021)
Science (Final Score 88.80/100)

Experiences

Right now, I don't have a professional work yet relating to this. But here some relevant experiences I've been doing in college

Universitas Gadjah Mada
Solid Waste Management - College Group Assignment

- Conduct a survey about solid waste management through online form with applying likert scale
- Test and filter the survey result using reliability test to make sure that the data is reliable to be analyzed

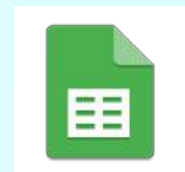

Universitas Gadjah Mada
Linear Regression - College Group Assignment

- Collect academic dataset (such as avg GPA, avg duration of study, etc.) to classify accreditation of a major
- Train its dataset to find best parameters for logistic regression model

Related Skills

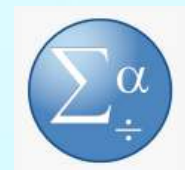

Here some tools I've known and some things I familiar with

Spreadsheet

Ms. Excel & Google Sheet

- Basic data manipulation
- Data looking with XLOOKUP, VLOOKUP, and HLOOKUP
- Conditional filtering with IF and logical operator (AND, OR)
- Cleaning data using remove duplicates, TRIM, CLEAN
- Aggregating data using pivot table

SPSS

IBM SPSS Statistics 25

- Basic data manipulation
- Statistical test
- Hypothetical test

Python

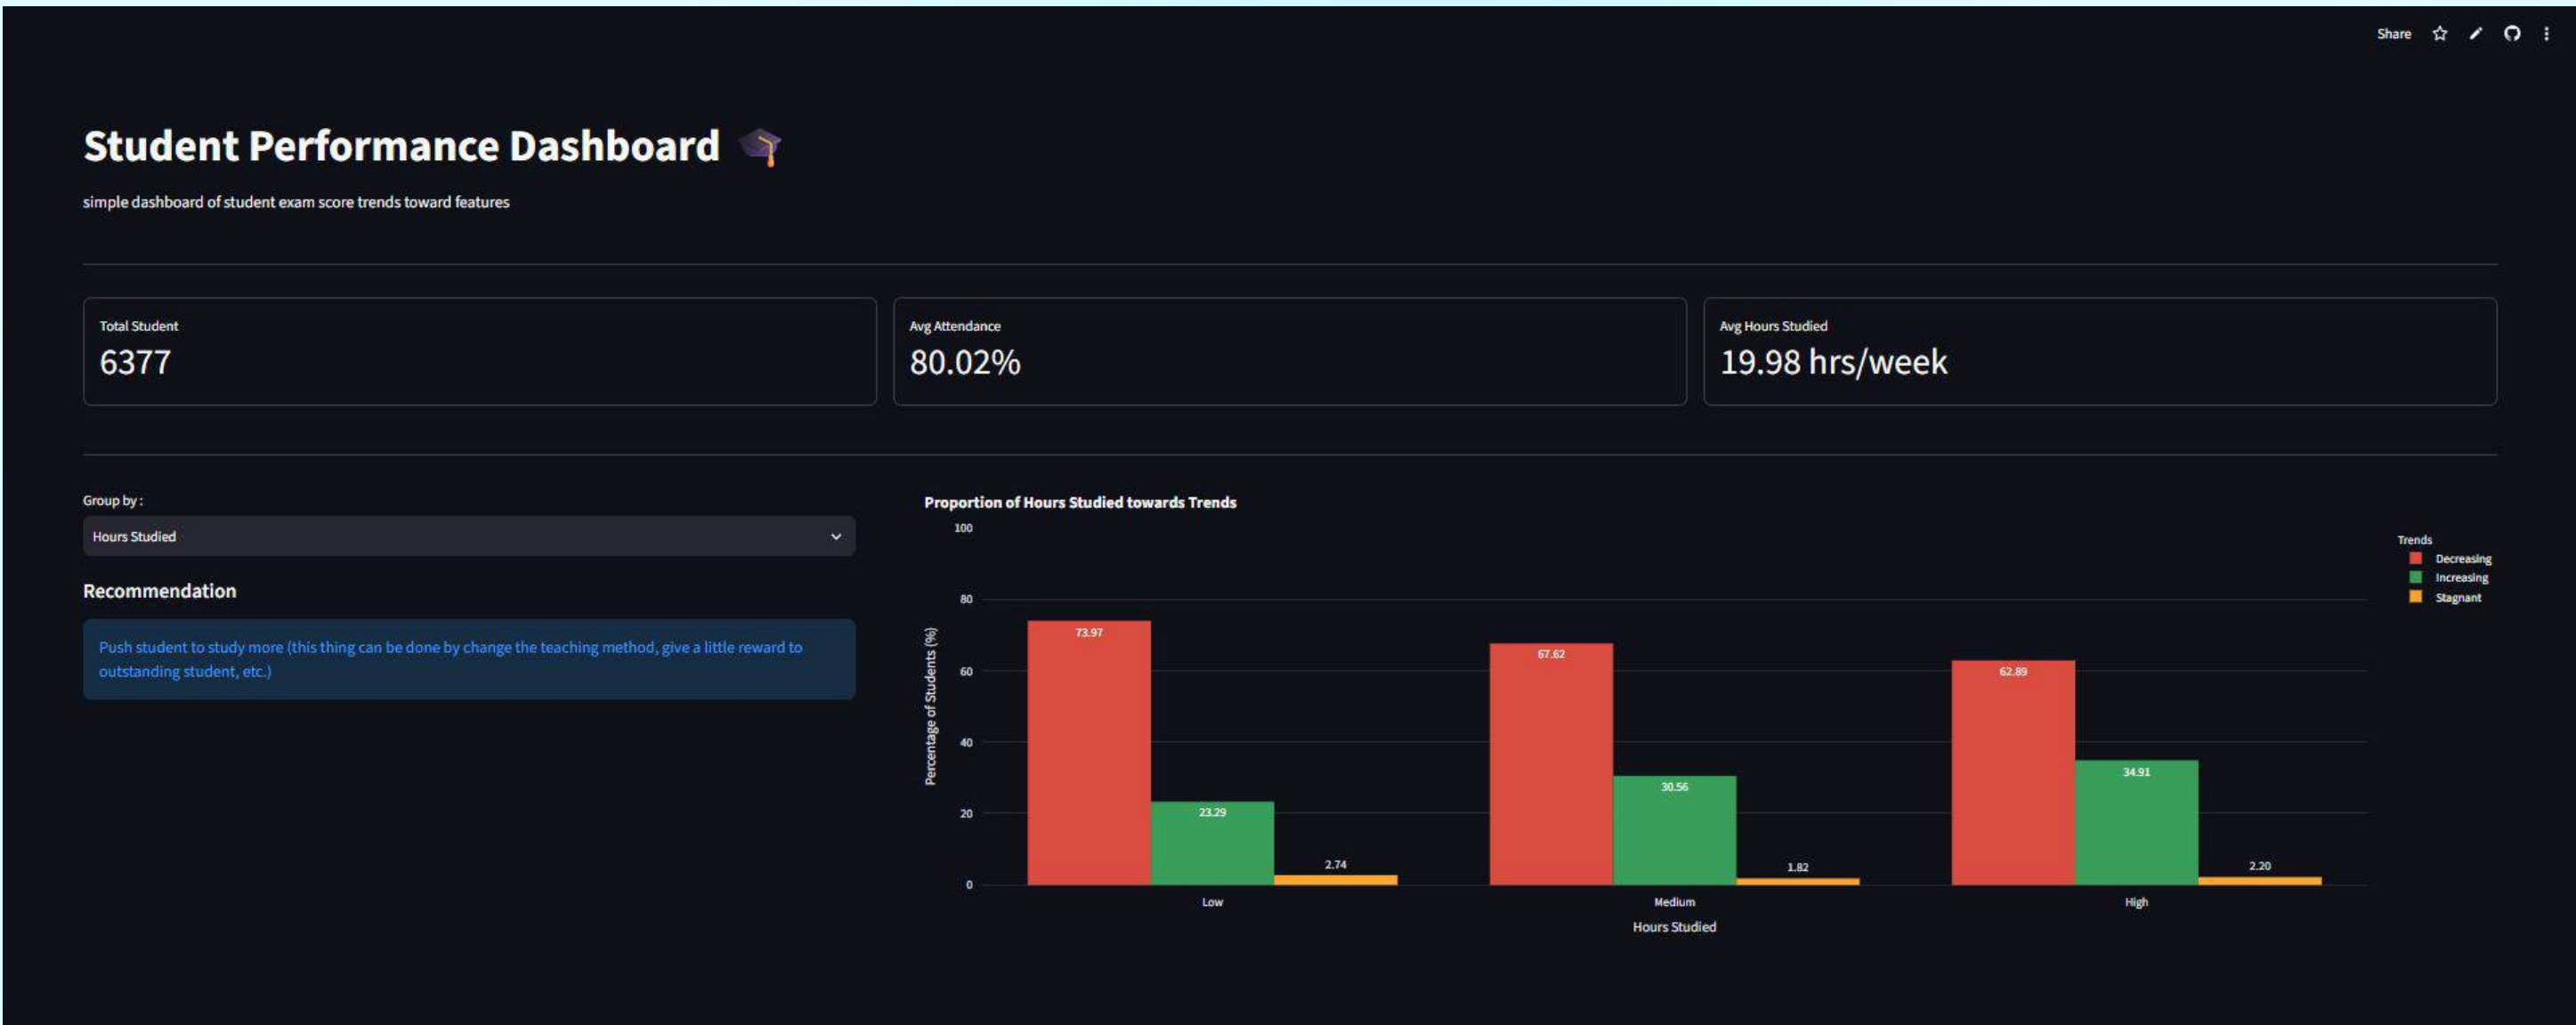

pandas, numpy, matplotlib, streamlit, scikit-learn

- Basic data manipulation using pandas and numpy
- Cleaning data using pandas
- Aggregating or groupby a dataframe
- Visualizing data using matplotlib
- Train data to make predictive model using scikit-learn
- Creating interactive dashboard using streamlit

Projects

Student Performance Factors Analysis

- 1 data preparation and data cleaning using pandas
- 2 exploring data and exporting cleaned data
- 3 visualize with streamlit

Dashboard

Notebook

[Streamlit/Student-Performance-Factors](#)

[Kaggle/Student-Performance-Factors](#)

Projects

Titanic Survivor Classifier

- 1 data preparation and data cleaning using pandas
- 2 exploring data, training data, and exporting cleaned data
- 3 visualize with streamlit and vercel

The "Titanic Survival Prediction" form asks for user input to predict survival. It includes fields for "How old are you?" (with the value 24), "What is your gender?" (with the value Female), and "How many family members/relatives are coming with you?" (with the value 2). A "Predict" button is at the bottom.
